

## HOW TO “DAISY-CHAIN” MULTIPLE T2-SWITCH PRODUCTS

Our T2-Switch product is ½ of a T4-Switch. You can “daisy-chain” two T2-Switch products to be used as a substitute for a T4-Switch product. This is desirable when you need to control two separate 4-wire humbucker pickups, but you want the control switches for each pickup located in a different area.

You can also daisy-chain three T2-Switch products to control Stratocasters that have had their single-coil pickups replaced by 4-wire humbucker pickups, or other instruments with three 4-wire humbucker pickups; giving you over 400 pickup tones. Our website’s Document Library has more useful wiring tips for you.
